## Description

The WibuBox/M+ is the WibuKey protection hardware for CardBus (32 Bit, PCMCIA) interface of PCs, Apple Macintosh and others. Encryption works with WibuKey algorithm 1, 2 or 4 depending on up to 10 nonvolatile stored Standard Entries or Master Entries. The first 5 entries may have an additional entry – data, expiration date or limit counter – which then occupies one entry. The WibuBox/M+ has an additional 16 kbyte memory.

The WibuBox/M+ contains a CardBus to USB controller and connects WibuKey via USB internally. All data communication is realized by endpoint 0 control transfers with full speed (12 MBit). WibuKey driver software supports Windows 98/ME/2000/XP/Server2003, MacOS 8 and higher and all Linux distributions supporting USB. The WibuBox/M+ needs WibuKey Runtime 4.10 or higher.
